

PRODUCT PORTFOLIO

HOME CARE & SOAP / DETERGENT INGREDIENTS

1 Sodium Lauryl Ether Sulfate (SLES)

Sodium Lauryl Ether Sulfate (SLES) is a widely used surfactant in personal care products.

- Personal Care Products (e.g., shampoos, body washes)
- Household Cleaners (e.g., dishwashing liquids, laundry detergents)
- Industrial Cleaners
- Textile Processing
- Agrochemicals
- Emulsion Polymerization
- Firefighting Foams

2 Sodium Silicate Liquid / Lumps

Sodium silicate, whether in liquid or solid form, has a wide range of industrial and commercial applications due to its unique properties.

- Adhesives and Sealants
- Detergents and Soaps
- Cement and Concrete
- Additive Water Treatment
- Paper and Textile Sizing
- Agent Corrosion Inhibitor

3 SLS Powder / Needles

SLS (Sodium Lauryl Sulfate) commonly comes in powder or needle-like crystal form. Here are some of its main uses:

- Personal Care Products (e.g., toothpaste, shampoo)
- Cleaning Products (e.g., dishwashing detergents)
- Textile Processing
- Emulsifying Agent
- Laboratory Reagent
- Industrial Processes (e.g., metal cleaning)

PRODUCT PORTFOLIO

HOME CARE & SOAP / DETERGENT INGREDIENTS

1 Soap Noodles

Soap noodles are essentially the basic building blocks of soap production, typically made from oils, fats, and other ingredients. Here are some common uses of soap noodles:

- Soap Manufacturing
- Personal Care Products
- Household Cleaners
- Cosmetics
- Industrial Processes
- Textile Processing

Soap Noodles

2 Benzalkonium Chloride (BKC) 50 / 80%

Benzalkonium Chloride (BKC), available in concentrations of 50% and 80%, has diverse applications across various industries. Here are its primary uses:

- Disinfectants and Antiseptics
- Preservatives in Pharmaceuticals and Cosmetics
- Biocides and Algaecides in Water Treatment
- Disinfection in Agriculture
- Wood and Textile Preservation
- Biomedical Applications
- Personal Care Products
- Personal Care Products
- Sanitizing in the Food Industry

4AC Zeolite

3 LABSA 90 / 96%

Linear Alkylbenzene Sulfonic Acid (LABSA), available in concentrations of 90% and 96%, is widely used in various industries. Here are its primary applications:

- Detergent Production
- Household Cleaners
- Industrial Cleaning Products
- Textile Processing
- Agricultural Chemicals
- Leather Industry
- Adhesive Manufacturing
- Oil Well Drilling Operations

LABSA 96%

4 Polyacrylic Acid (PAA)

Polyacrylic acid (PAA) finds applications in various industries due to its unique properties:

- Water treatment
- Personal care products
- Detergents and cleaners
- Textile processing
- Adhesives and sealants
- Paints and coatings
- Oil and gas industry
- Medical applications
- Food industry
